Working Prototype Known Problems Report

List of functions not working correctly:

1. Camera screen: If the user clicks on the 'Save' button, before the 'Take a picture' button, the app crashes.
2. Profile screen: When a user clicks on 'Signout button' and is navigated to Login Screen, their username and password are still shown.
3. Login screen: Must click on 'Login' button twice occasionally to login.
4. Camera screen: User has the ability to click on the 'Save' button more than once, which causes the same image to be saved multiple times.
5. Gallery screen: Times displayed in the gallery screen are missing a 0 if the minute value is less than 10.
6. Camera screen: Occasionally, the app freezes when trying to save a picture, or goes to a white screen.
7. Register screen: Users are able to register with an existing username. This is an issue when someone wants to add a new friend.
8. Security: Passwords are being stored in clear text.
9. Profile screen: Habits are not displayed in order of creation.
10. Habit details screen: When completing a streak of 1 day with a picture the streak will not update properly until you record it again.
11. Login screen: Warning when the debugger for expo is not in its own tab.
12. Register screen, Login screen: Keyboard covers the input fields.
13. Register screen: If you double click on register, it registers email twice.
